### Case Studies

Best Pitch: Intervue — Season 3, Episode 2

Weakest Investment Case: Head & Heart — Season 1, Episode 2

## CERTIFICATE / DECLARATION

I hereby declare that this assignment titled “Shark Tank India Pitch Analysis: A Comparative Business Analytics Study” has been prepared for academic purposes as part of the Business Analytics course. The work is based on publicly available information about the selected Shark Tank India pitches and includes analytical calculations and interpretation.

I further declare that the analysis has been organized for educational use and that sources have been acknowledged in the references section.

# 1. INTRODUCTION

Shark Tank India provides a useful real-world setting for applying Business Analytics because founders are required to justify their businesses using revenue, growth, margins, customer information, market opportunity, competition and valuation. This assignment compares Intervue, selected as the stronger investment case, and Head & Heart, selected as the weaker investment case for analytical purposes. "Weakest" refers to the investment case presented on the show, not to the founders or product as a whole.

## 2. OBJECTIVES OF THE STUDY

- Identify how Sharks use quantitative and qualitative information to evaluate businesses.
- Analyse revenue, growth, valuation and business-model indicators.
- Connect Shark questions with Business Analytics concepts such as descriptive, diagnostic, predictive and prescriptive analytics.
- Compare strengths and weaknesses of two contrasting pitches.
- Demonstrate how financial ratios and simple calculations support investment decisions.

## 3. RESEARCH METHODOLOGY

The study uses secondary research. Public pitch databases and pitch summaries were consulted to verify episode placement, founders, asks and deal outcomes. The Q&A; section summarizes televised questions/concerns rather than fabricating a word-for-word transcript where a complete official transcript was not publicly available. Calculations are derived from reported figures.

Intervue is listed in Season 3 Episode 2, asking ₹1.5 crore for 1% and receiving an on-air offer of ₹1.5 crore for 2% from Aman Gupta. ■cite■turn0search1■turn0search25■

Head & Heart is listed in Season 1 Episode 2, asking ₹50 lakh for 5% and receiving no deal. ■cite■turn0search0■turn0search24■

## 4. CASE STUDY I — INTERVUE (BEST INVESTMENT CASE)

**Company:** Intervue.io

**Founders:** Rahul Arora and Pushpender Singh Rautela

**Industry:** HR Technology / Technical Hiring

**Business model:** Technology-enabled B2B interview and hiring service

**Episode:** Shark Tank India Season 3, Episode 2

**Original ask:** ₹1.5 crore for 1% equity

**On-air deal:** ₹1.5 crore for 2% equity from Aman Gupta

Intervue provides online technical interviews for companies. The core problem is that engineering employees spend substantial time interviewing candidates. Intervue connects companies with technical interviewers and provides structured evaluations, helping employers accelerate hiring. Public pitch summaries report that the platform reduced average position fulfilment from roughly 45 days to about 7 days. ■cite■turn0search1■turn0search2■

### Founders and founder-market fit

Rahul Arora and Pushpender Singh Rautela are software professionals who had worked together previously. Rahul's experience with large-scale engineering recruitment helped identify interview bandwidth as a practical operational problem. The founders positioned Intervue as a solution that lets companies outsource technical interviewing while maintaining structured assessment.

### Product and value proposition

The product is a technology-enabled technical interviewing platform. Companies can use the platform to arrange technical interviews, access interviewers and receive candidate assessments. The value proposition is faster hiring, reduced internal interviewer workload and a more standardized evaluation process. ■cite■turn0search1■turn0search11■

### Seven Shark Questions / Pitcher Answers

**Shark Question / Concern:** 1. Founder story / problem

**Pitcher's Answer — summarized:** The Sharks asked about the founders' background and why they started the business. Rahul explained that his experience conducting a very large number of technical interviews exposed the problem of engineering bandwidth being consumed by recruitment. The founders built Intervue to solve that bottleneck.

**Shark Question / Concern:** 2. Candidate screening

**Pitcher's Answer — summarized:** The Sharks questioned how the platform handles a large applicant pool and identifies technically suitable candidates. The founders explained that Intervue conducts technical evaluations through its network of engineers and gives companies structured recommendations.

**Shark Question / Concern:** 3. Interviewer earnings

**Pitcher's Answer — summarized:** The Sharks asked how much interviewers could earn. Public pitch summaries report that interviewers could earn meaningful monthly income by conducting interviews, creating a supply-side incentive for the marketplace. ■cite■turn0search1■

**Shark Question / Concern:** 4. Revenue and scale

**Pitcher's Answer — summarized:** The Sharks questioned the scale of the business and its revenue trajectory. The founders presented rapid revenue growth and future projections. Public summaries report approximately ■88 lakh FY22 revenue and ■8.7 crore FY23 revenue.

**Shark Question / Concern:** 5. Competition

**Pitcher's Answer — summarized:** The Sharks asked about competitors and international players. The founders discussed the competitive landscape and explained why Intervue's India-focused economics, interviewer network and accumulated interview capability could differentiate it.

**Shark Question / Concern:** 6. Valuation

**Pitcher's Answer — summarized:** The Sharks challenged the ■1.5 crore for 1% ask. The founders justified the valuation using growth, prior financing valuation and future international opportunity. The original ask implied a ■150 crore valuation.

**Shark Question / Concern:** 7. Business model / scalability

**Pitcher's Answer — summarized:** The Sharks examined whether technical interviewing could be reliably outsourced and scaled. The founders explained the interviewer marketplace and technology layer, arguing that companies could save engineering time while Intervue standardized the interview process.

## **Analytical interpretation**

Intervue is a strong analytics case because the pitch connects a defined operational problem with measurable business outcomes. It can be evaluated through revenue growth, marketplace economics, hiring-cycle reduction, valuation and competitive positioning. The on-air deal of ₹1.5 crore for 2% implies a ₹75 crore deal valuation.

■cite■turn0search2■turn0search3■

## 5. CASE STUDY II — HEAD & HEART (WEAKEST INVESTMENT CASE)

**Company:** Head & Heart

**Founders:** Gurnandan Singh and Rajvinder Kaur

**Industry:** Education / Child Learning / Cognitive Development

**Episode:** Shark Tank India Season 1, Episode 2

**Original ask:** ₹50 lakh for 5% equity

**Outcome:** No Deal

Head & Heart presented a child-learning and brain-development program. During the pitch, children demonstrated unusual abilities such as identifying objects and colours while blindfolded. The founder described the approach as “Brain Optimization” and linked it to a technique used in Japan. The stated benefits included concentration and improved academic performance. ■cite■turn0search4■

### Product and business model

The offering was a structured cognitive-development course using exercises intended to improve memory, reasoning, concentration and mental calculation. Public pitch records identify the business as a Brain Development Course and show an original ask of ₹50 lakh for 5% equity at a ₹10 crore implied valuation. ■cite■turn0search0■turn0search5■

### Seven Shark Questions / Pitcher Answers

Accuracy note: Publicly indexed sources do not provide a complete official verbatim English transcript of every Head & Heart exchange. The seven items below therefore summarize the televised questions/concerns and founders' responses rather than presenting invented verbatim dialogue.

**Shark Question / Concern:** 1. What is the benefit of the technique?

**Pitcher's Answer — summarized:** The Sharks asked what children gain from learning the technique. The children/founders explained that it was intended to improve concentration and academic performance. ■cite■turn0search4■

**Shark Question / Concern:** 2. How does the brain-optimization method work?

**Pitcher's Answer — summarized:** The founders explained their Brain Optimization approach and demonstrated it through children identifying objects and colours while blindfolded. ■cite■turn0search4■

**Shark Question / Concern:** 3. What is the business / revenue model?

**Pitcher's Answer — summarized:** The founders explained their training-oriented model and the way the program could be delivered through training operations. Public summaries identify scalability as a major concern raised by the Sharks.

**Shark Question / Concern:** 4. Can the business scale nationally?

**Pitcher's Answer — summarized:** The Sharks questioned whether a personalized training service could reach a much larger national market. The founders discussed their expansion approach, but scalability remained a concern.

**Shark Question / Concern:** 5. What makes the business different from competitors?

**Pitcher's Answer — summarized:** The founders emphasized their Brain Optimization methodology and demonstrated outcomes. The Sharks remained concerned about differentiation and whether the proposition could be defended against alternatives.

**Shark Question / Concern:** 6. Is the valuation justified?

**Pitcher's Answer — summarized:** The founders asked ₹50 lakh for 5%, implying a ₹10 crore valuation. The Sharks challenged the investment case in relation to business scale, sustainability and growth potential. ■cite■turn0search0■turn0search5■

**Shark Question / Concern:** 7. Can the business become a large, sustainable company?

**Pitcher's Answer — summarized:** The broader Shark concern was whether the service could become sufficiently scalable, differentiated and sustainable to justify investment. No Shark ultimately invested. ■cite■turn0search0■turn0search13■

### Analytical interpretation

Head & Heart is useful as a contrasting case because the Sharks' concerns centered on scalability, differentiation, sustainability and valuation. An interesting educational proposition still needs evidence that the model can scale, maintain quality and produce attractive financial returns. The pitch ended with no deal. ■cite■turn0search0■turn0search5■

## 6. BUSINESS ANALYTICS CALCULATIONS

### 6.1 Intervue — Implied Valuation

Original ask = ₹1.5 crore for 1% equity

Implied valuation = ₹1.5 crore ÷ 0.01 = ₹150 crore.

On-air deal = ₹1.5 crore for 2% equity

Implied deal valuation = ₹1.5 crore ÷ 0.02 = ₹75 crore.

### 6.2 Intervue — Revenue Growth

Using the publicly reported figures of approximately ₹0.88 crore FY22 revenue and ₹8.7 crore FY23 revenue:

Growth multiple = ₹8.7 ÷ ₹0.88 = 9.89×

Percentage increase =  $((8.7 - 0.88) \div 0.88) \times 100 \approx 889\%$ .

This is a historical comparison; it should not be interpreted as a guarantee of future growth.

### 6.3 Head & Heart — Implied Valuation

Original ask = ₹50 lakh for 5% equity

Implied valuation = ₹50 lakh ÷ 0.05 = ₹10 crore. <sup>5</sup>

### 6.4 Indicative Valuation-to-Revenue Illustration

If the approximately ₹30 lakh revenue figure reported in secondary pitch summaries is used as an illustrative base, then ₹10 crore ÷ ₹0.30 crore ≈ 33.3× revenue. This is only an indicative ratio because the exact revenue period and accounting definition should be verified from company financial statements before treating it as a formal valuation metric.

### 6.5 Analytics Framework

| Analytics Type | Intervue                                 | Head & Heart                                 |
|----------------|------------------------------------------|----------------------------------------------|
| Descriptive    | Historical revenue and hiring-cycle data | Training activity and pitch metrics          |
| Diagnostic     | Why hiring time can be reduced           | Why scalability/differentiation are concerns |
| Predictive     | Future revenue and market expansion      | Potential national expansion                 |
| Prescriptive   | Expand enterprise/global customer base   | Strengthen evidence and scalability          |

## 7. COMPARATIVE ANALYSIS

| Factor                | Intervue                                         | Head & Heart                                                     |
|-----------------------|--------------------------------------------------|------------------------------------------------------------------|
| Industry              | HR Tech / Technical Hiring                       | Education / Cognitive Training                                   |
| Core customer         | Companies / employers                            | Children / parents / education                                   |
| Original ask          | ■1.5 Cr for 1%                                   | ■50 Lakh for 5%                                                  |
| Implied ask valuation | ■150 Cr                                          | ■10 Cr                                                           |
| On-air outcome        | ■1.5 Cr for 2% — Aman Gupta                      | No Deal                                                          |
| Scalability           | Technology + interviewer network                 | Training/service model; questioned                               |
| Analytics strength    | Strong growth and measurable operational problem | Interesting product, but weaker quantitative investment evidence |
| Main risk             | Competition and sustaining growth                | Scalability, differentiation, evidence, valuation                |
| Investor confidence   | Higher                                           | Lower                                                            |

## 8. KEY FINDINGS

1. Revenue growth is powerful evidence, but it must be interpreted with margins, cash flow and sustainability.
2. Valuation should be supported by measurable performance rather than only future expectations.
3. Scalability is critical; technology-enabled processes can often scale faster than highly personalized services.
4. Competitive advantage must be clear and defensible.
5. Demonstrations and customer stories are useful, but investment decisions benefit from structured evidence and measurable outcomes.
6. Shark questions function as a practical business-analytics checklist covering market, customers, revenue, costs, growth, competition, valuation and future plans.

## 9. CONCLUSION

The comparison between Intervue and Head & Heart demonstrates how Business Analytics can be applied to real entrepreneurial decisions. Intervue presented a defined operational problem, a technology-enabled solution, evidence of rapid growth and a model that the Sharks could connect to a larger market. Head & Heart presented an interesting educational proposition, but the televised investment case faced more questions around scalability, differentiation, evidence, sustainability and valuation. Intervue therefore serves as the stronger investment case for this assignment, while Head & Heart serves as the weaker investment case—not because its founders or educational goals lack merit, but because the investment case was less convincing to the Sharks.
